ENVIRONMENTAL and SAFETY TECHNOLOGY

MARCOPOLO ENGINEERING

Marcopolo have recently launched the MESB&B, or 'Marcopolo Ecotone System Baling Sewage Landfill and Cycling Digestion for Bioenergetics and Mining Recovery' for short!

They are an engineering company who study, research and design complete industrial plant. Founded in Italy in 1989 it comprises 35 personnel, with 15 technicians, biologists, chemists geologists, agronomists, engineers and architects.

Their ideal is to provide a link between industry and nature; their projects often focus on waste problems in poorly serviced communities, eg. small islands or remote rural or mountain areas.

MESB&B can guarantee:

Total sewage digestion, at no extra cost, produced during tourist seasons.

Waste digestion with no negative environmental impact.

The cycling and continuous digestion of waste in one place.

Regular production of electrical and thermic energy.

Fast metabolization, reduction of chemical pollutants to produce non-polluting organics.

The production of cleaned and pre-selected secondary raw materials.
