the environment"

MARCOPOLO

ENVIRONMENTAL GROUP

Without **MARCOPOLO** technology, toxic and harmful biogas pollutes by migrating into the atmosphere and subsoil; chemical substances disperse in the atmosphere, and the so called "volatile acids" fall back onto cultivation and on houses, even at a distance of a hundred kilometres. Thanks to securing scrap-yards, **MARCOPOLO** reclaims the environment by conserving the quality of local agricultural and typical products. Furthermore, thanks to the inoculum of the **Enzyveba** product, of microorganisms that are not OGM, mould, bacteria and fungus produced by the company, not only is the organic degradation of the waste accelerated, but foul smelling emissions in the scrap-yard are avoided, as **Enzyveba** is a natural microbiological bio-activator, which is the result of years of research with primary Italian universities.
